

<<算术教程>>

图书基本信息

书名：<<算术教程>>

13位ISBN编号：9787510005350

10位ISBN编号：7510005353

出版时间：2009-8

出版时间：世界图书出版公司

作者：Jean-Pierre Serre

页数：115

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

前言

This book is divided into two parts. The first one is purely algebraic. Its objective is the classification of quadratic forms over the field of rational numbers (Hasse-Minkowski theorem). It is achieved in Chapter IV. The first three chapters contain some preliminaries : quadratic reciprocity law , p -adic fields , Hilbert symbols. Chapter V applies the preceding results to integral quadratic forms of discriminant $+1$. These forms occur in various questions : modular functions , differential topology , finite groups. The second part (Chapters VI and VII) uses "analytic" methods (holomorphic functions) . Chapter VI gives the proof of the "theorem on arithmetic progressions" due to Dirichlet; this theorem is used at a critical point in the first part (Chapter 111 , no. 2.2) . Chapter VII deals with modular forms , and in particular , with theta functions. Some of the quadratic forms of Chapter V reappear here. The two parts correspond to lectures given in 1962 and 1964 to second year students at the Ecole Normale Supérieure. A redaction of these lectures in the form of duplicated notes , was made by J.-J. Saïas (Chapters I-IV) and J.-P. Ramis and G. Ruget (Chapters VI-VII) . They were very useful to me; I extend here my gratitude to their authors.

内容概要

The first one is purely algebraic. Its objective is the classification of quadratic forms over the field of rational numbers (Hasse-Minkowski theorem). It is achieved in Chapter IV. The first three chapters contain some preliminaries : quadratic reciprocity law , p -adic fields , Hilbert symbols. Chapter V applies the preceding results to integral quadratic forms of discriminant $+1$. These forms occur in various questions : modular functions , differential topology , finite groups. The second part (Chapters VI and VII) uses "analytic" methods (holomorphic functions) . Chapter VI gives the proof of the "theorem on arithmetic progressions" due to Dirichlet; this theorem is used at a critical point in the first part (Chapter 111 , no. 2.2) . Chapter VII deals with modular forms , and in particular , with theta functions. Some of the quadratic forms of Chapter V reappear here.

书籍目录

Preface
Part I-Algebraic Methods
Chapter I Finite fields 1-Generalities 2-Equations over a finite field
3-Quadratic reciprocity law Appendix-Another proof of the quadratic reciprocity law
Chapter II p -adic fields
1-The ring \mathbb{Z}_p and the field 2- p -adic equations 3-The multiplicative group of
Chapter III Hilbert symbol
1-Local properties 2-Global properties
Chapter IV Quadratic forms over \mathbb{Q}_p and over \mathbb{Q} 1-Quadratic forms
2-Quadratic forms over \mathbb{Q} 3-Quadratic forms over \mathbb{Q} Appendix Sums of three squares
Chapter V Integral quadratic forms with discriminant 1-Preliminaries 2-Statement of results 3-Proofs
Part II-Analytic Methods
Chapter VI-The theorem on arithmetic progressions 1-Characters of finite abelian groups 2-Dirichlet series
3-Zeta function and L functions 4-Density and Dirichlet theorem
Chapter VII-Modular forms 1-The modular group 2-Modular functions 3-The space of modular forms 4-Expansions at infinity 5-Hecke operators
6-Theta functions
Bibliography
Index of Definitions
Index of Notations
