

<<曲线模>>

图书基本信息

书名：<<曲线模>>

13位ISBN编号：9787510032974

10位ISBN编号：7510032970

出版时间：2011-4

出版时间：世界图书出版公司

作者：哈里斯 (JoeHarris) IanMorrison 著

页数：366

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<曲线模>>

内容概要

《曲线模》是Springer数学研究生教材系列之一，全面而深入地讲述了曲线模这个科目，即代数曲线及其在族中是如何变化的。

《曲线模》对曲线模的讲述，符合学习理解的规律，也是对该领域的广泛而简洁的概述，使得具有现代代数几何背景的读者很容易学习理解。

书中包括了许多技巧，如Hilbert空间，变形原理，稳定约化，相交理论，几何不变理论等，曲线模型的讲述涉及从例子到应用。

文中继而讨论了曲线模空间的构成，通过有限线性系列说明了Brill-Noether和Gieseker-Petri定理证明的典型应用，也讲述了一些有关不可约性，完全子变量，丰富除子和Kodaira维数的重要几何结果。

书中也包括了该领域相当重要的重要定理几何开放性问题，但只是做了简明引入，并没有展开讨论。

书中众多的练习和图例，使得内容更加丰富，易于理解。

书籍目录

preface
 1 parameter spaces : constructions and examples
 a parameters and moduli
 b construction of the hilbert scheme
 c tangent space to the hilbert scheme
 d extrinsic pathologies
 e mumford's example
 f other examples
 g dimension of the hilbert scheme
 h Severi varieties
 i Hurwitz schemes
 j basic facts about moduli spaces of curves
 k why do fine moduli spaces of curves not exist ?
 b moduli spaces we'll be concerned with
 c constructions of M_g
 d the Teichmüller approach
 e the Hodge theory approach
 f the geometric invariant theory (G.I.T.) approach
 g geometric and topological properties
 h basic properties
 i local properties
 j complete subvarieties of M_g
 k cohomology of M_g : Hatcher's theorems
 l cohomology of the universal curve
 m cohomology of Hilbert schemes
 n structure of the tautological ring
 o Witten's conjectures and Kontsevich's theorem
 p moduli spaces of stable maps
 q techniques
 r basic facts about nodal and stable curves
 s dualizing sheaves
 t automorphisms
 u deformation theory
 v overview
 w deformations of smooth curves
 x variations on the basic deformation theory
 y plan
 z universal deformations of stable curves
 aa deformations of maps
 ab stable reduction
 ac results
 ad examples
 ae interlude : calculations on the moduli stack
 af divisor classes on the moduli stack
 ag existence of tautological families
 ah Grothendieck-Riemann-Roch and Porteous
 ai Grothendieck-Riemann-Roch
 aj Chern classes of the Hodge bundle
 ak Chern class of the tangent bundle
 al Porteous' formula
 am the hyperelliptic locus in M_3
 an relations amongst standard cohomology classes
 ao divisor classes on Hilbert schemes
 ap test curves : the hyperelliptic locus in M_3
 aq begun
 ar admissible covers
 as the hyperelliptic locus in M_3
 at completed
 au construction of M_3
 av background on geometric invariant theory
 aw the G.I.T. strategy
 ax finite generation of and separation by invariants
 ay the numerical criterion
 az stability of plane curves
 ba stability of Hilbert points of smooth curves
 bb the numerical criterion for Hilbert points
 bc Gieseker's criterion
 bd stability of smooth curves
 be construction of M_g via the potential stability theorem
 bf the plan of the construction and a few corollaries
 bg the potential stability theorem
 bh limit linear series and Brill-Noether theory
 bi an introductory remarks on degenerations
 bj limits of line bundles
 bk limits of linear series : motivation and examples
 bl limit linear series : definitions and applications
 bm limit linear series
 bn smoothing limit linear series
 bo limits of canonical series and Weierstrass points
 bp limit linear series on flag curves
 bq inequalities on vanishing sequences
 br the case $p = 0$
 bs proof of the Gieseker-Petri theorem
 bt geometry of moduli spaces : selected results
 bu irreducibility of the moduli space of curves
 bv Diaz' theorem
 bw the idea : stratifying the moduli space
 bx the proof
 cy moduli of hyperelliptic curves
 dz fiddling around
 ee the calculation for an (almost) arbitrary family
 ef the Picard group of the hyperelliptic locus
 eg ample divisors on $M_{g,n}$
 eh an inequality for generically Hilbert stable families
 ei proof of the theorem
 fj an inequality for families of pointed curves
 fk ample divisors on $M_{g,e}$
 gl irreducibility of the Severi varieties
 gm initial reductions
 gn analyzing a degeneration
 ho an example
 hp completing the argument
 iq Kodaira dimension of M_g
 jr writing down general curves
 ks basic ideas
 lt pulling back the divisors
 lu divisors on M_g that miss j ($M_2, 1 \setminus w$)
 lv divisors on M_g that miss i (M_0, g)
 lw further divisor class calculations
 lx curves defined over \mathbb{Q}
 ly bibliography
 lz index
