

<<差分方程导论>>

图书基本信息

书名：<<差分方程导论>>

13位ISBN编号：9787510033070

10位ISBN编号：7510033071

出版时间：2011-4

出版时间：世界图书出版公司

作者：埃莱迪

页数：539

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<差分方程导论>>

内容概要

本书是一本学习差分方程的本科生教程。书中将差分方程的经典方法和现代方法有机结合，包括了最新最权威的一手材料，并且在表述上足够简洁明了，适合高年级的本科生和研究生使用。本书是第三版，这版中包括了更多的证明，图表和应用，增加了许多新的内容，如，讲述高阶尺度差分方程的一章；有关一维映射的局部稳定性和全局稳定性的内容；介绍解的渐进思想的一节；levin-may定理的详细证明以及lap flour-beetle模型的最新结果。

读者对象：数学专业的本科生，研究生和相关的科研人员。

<<差分方程导论>>

书籍目录

- preface to the third edition
- preface to the second edition
- preface to the first edition
- list of symbols
- 1 dynamics of first-order difference equations
 - 1.1 introduction
 - 1.2 linear first-order difference equations
 - 1.2.1 important special cases
 - 1.3 equilibrium points
 - 1.3.1 the stair step (cobweb) diagrams
 - 1.3.2 the cobweb theorem of economics
 - 1.4 numerical solutions of differential equations
 - 1.4.1 euler's method
 - 1.4.2 a nonstandard scheme
 - 1.5 criterion for the asymptotic stability of equilibrium points
 - 1.6 periodic points and cycles
 - 1.7 the logistic equation and bifurcation
 - 1.7.1 equilibrium points
 - 1.7.2 2-cycles
 - 1.7.3 22-cycles
 - 1.7.4 the bifurcation diagram
 - 1.8 basin of attraction and global stability (optional)
- 2 linear difference equations of higher order
 - 2.1 difference calculus
 - 2.1.1 the power shift
 - 2.1.2 factorial polynomials
 - 2.1.3 the antidifference operator
 - 2.2 general theory of linear difference equations
 - 2.3 linear homogeneous equations with constant coefficients
 - 2.4 nonhomogeneous equations: methods of undetermined coefficients
 - 2.4.1 the method of variation of constants (parameters)
 - 2.5 limiting behavior of solutions
 - 2.6 nonlinear equations transformable to linear equations
 - 2.7 applications
 - 2.7.1 propagation of annual plants
 - 2.7.2 gambler's ruin
 - 2.7.3 national income
 - 2.7.4 the transmission of information
- 3 systems of linear difference equations
 - 3.1 autonomous (time-invariant) systems
 - 3.1.1 the discrete analogue of the putzer algorithm.
 - 3.1.2 the development of the algorithm for an
 - 3.2 the basic theory

<<差分方程导论>>

- 3.3 the jordan form: autonomous (time-invariant) systems revisited
 - 3.3.1 diagonalizable matrices
 - 3.3.2 the jordan form
 - 3.3.3 block-diagonal matrices
- 3.4 linear periodic systems
- 3.5 applications
 - 3.5.1 markov chains
 - 3.5.2 regular markov chains
 - 3.5.3 absorbing markov chains
 - 3.5.4 a trade model
 - 3.5.5 the heat equation
- 4 stability theory
 - 4.1 a norm of a matrix
 - 4.2 notions of stability
 - 4.3 stability of linear systems
 - 4.3.1 nonautonomous linear systems
 - 4.3.2 autonomous linear systems
 - 4.4 phase space analysis
 - 4.5 liapunov's direct, or second, method
 - 4.6 stability by linear approximation
 - 4.7 applications
 - 4.7.1 one species with two age classes
 - 4.7.2 host-parasitoid systems
 - 4.7.3 a business cycle model
 - 4.7.4 the nicholson-bailey model
 - 4.7.5 the flour beetle case study
- 5 higher-order scalar difference equations
 - 5.1 linear scalar equations
 - 5.2 sufficient conditions for stability
 - 5.3 stability via linearization
 - 5.4 global stability of nonlinear equations
 - 5.5 applications
 - 5.5.1 flour beetles
 - 5.5.2 a mosquito model
- 6 the z-transform method and volterra difference equations
 - 6.1 definitions and examples
 - 6.1.1 properties of the z-transform
 - 6.2 the inverse z-transform and solutions of difference equations
 - 6.2.1 the power series method
 - 6.2.2 the partial fractions method
 - 6.2.3 the inversion integral method
 - 6.3 volterra difference equations of convolution type: the scalar case
 - 6.4 explicit criteria for stability of volterra equations
 - 6.5 volterra systems

<<差分方程导论>>

- 6.6 a variation of constants formula
- 6.7 the z-transform versus the laplace transform
- 7 oscillation theory
- 7.1 three-term difference equations
- 7.2 self-adjoint second-order equations
- 7.3 nonlinear difference equations
- 8 asymptotic behavior of difference equations
- 8.1 tools of approximation
- 8.2 poincare's theorem
- 8.2.1 infinite products and perron's example
- 8.3 asymptotically diagonal systems
- 8.4. high-order difference equations
- 8.5 second-order difference equations
- 8.5.1 a generalization of the poincare-perron theorem.
- 8.6 birkhoff's theorem
- 8.7 nonlinear difference equations
- 8.8 extensions of the poincare and perron theorems
- 8.8.1 an extension of perron's second theorem
- 8.8.2 poincare's theorem revisited
- 9 applications to continued fractions and orthogonal polynomials
- 9.1 continued fractions: fundamental recurrence formula
- 9.2 convergence of continued fractions
- 9.3 continued fractions and infinite series
- 9.4 classical orthogonal polynomials
- 9.5 the fundamental recurrence formula for orthogonal polynomials
- 9.6 minimal solutions, continued fractions, and orthogonal polynomials
- 10 control theory
- 10.1 introduction
- 10.1.1 discrete equivalents for continuous systems
- 10.2 controllability
- 10.2.1 controllability canonical forms
- 10.3 observability
- 10.3.1 observability canonical forms
- 10.4 stabilization by state feedback (design via pole placement)
- 10.4.1 stabilization of nonlinear systems by feedback
- 10.5 observers
- 10.5.1 eigenvalue separation theorem
- a stability of nonhyperbolic fixed points of maps on the real line
- a.1 local stability of nonoscillatory nonhyperbolic maps
- a.2 local stability of oscillatory nonhyperbolic maps
- a.2.1 results with $g(x)$
- b the vandermonde matrix

<<差分方程导论>>

- c stability of nondifferentiable maps
- d stable manifold and the hartman-grobman-cushing theorems
 - d.1 the stable manifold theorem
 - d.2 the hartman-grobman-cushing theorem
- e the levin-may theorem
- f classical orthogonal polynomials
- g identities and formulas
- answers and hints to selected problems
- maple programs
- references
- index
