

<<莫尔斯理论>>

图书基本信息

书名：<<莫尔斯理论>>

13位ISBN编号：9787510037481

10位ISBN编号：7510037484

出版时间：2011-7

出版时间：世界图书出版公司

作者：John Milnor

页数：153

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<莫尔斯理论>>

内容概要

This book gives a present-day account of Marston Morse's theory of the calculus of variations in the large. However, there have been important developments during the past few years which are not mentioned. Let me describe three of these.

作者简介

作者：(美国)米尔诺 (J.Milnor)

<<莫尔斯理论>>

书籍目录

PREFACE
 PART 1 NON-DEGENERATE SMOOTH FUNCTIONS ON A MANIFOLD
 Introduction
 Definitions and Lemmas
 Homotopy Type in Terms of Critical Values
 Examples
 The Morse Inequalities
 Manifolds in Euclidean Space: The Existence of Non-degenerate Functions
 The Lefschetz Theorem on Hyperplane Sections
 PART 2 A RAPID COURSE IN RIEMANNIAN GEOMETRY
 Covariant Differentiation
 The Curvature Tensor
 Geodesics and Completeness
 PART 3 THE CALCULUS OF VARIATIONS APPLIED TO GEODESICS
 The Path Space of a Smooth Manifold
 The Energy of a Path
 The Hessian of the Energy Function at a Critical Path
 Jacobi Fields: The Null-space of E''
 The Index Theorem
 A Finite Dimensional Approximation to n
 The Topology of the Full Path Space
 Existence of Non-conjugate Points
 Some Between Topology and Curvature
 PART 4 APPLICATIONS TO LIE GROUPS AND SYMMETRIC SPACES
 Symmetric Spaces
 Lie Groups as Symmetric Spaces
 Whole Manifolds of Minimal Geodesics
 The Bott Periodicity Theorem for the Unitary Group
 The Periodicity Theorem for the Orthogonal Group
 APPENDIX THE HOMOTOPY TYPE OF A MONOTONE UNION
