章节摘录

The research on TP transfer has gained its attention since Parlv1980's and witnessed its uprising in C.hina in the 1990s. Chineses cholars have addressed a wide range of featurcs of IP ancloitcd out novel insights into this issue by initiating explicit and implicitdis crimination among general manifestations of TP , yet the problemremains that what is the demarcation between these types and whatforms they take in compositions. With these doubts , the author makes efforts to unfold a full picture of the phenomena. Furthermore , the mainimpetus for the production of this book is to dig out the root of TPtransfer from a cognitive perspective. Kellerman raised fascinatingtheoretical assumptions to approach transfer from a cognitive perspective and many consequent researches have proved the validity of Kellerman'smarkedness theory in explaining transfer production. Moreover , gnitive markedness theory was suggested by Rutherford (1983) to beapplied in the research of TP transfer co reveal the relationship of thecognitive aspect of sensitivity with the production of TP transfer , so herecomes the attempt of the author to explore Lhe potentials of this theory in TP transfer studies. Nevertheless , some flaws can be identified iri thistheory and has aroused some criticisms. Generally speaking , there arethree main problems in Kellerman's theoretical claims on markedness and transferabilitv.
