

<<双曲几何讲义>>

图书基本信息

书名：<<双曲几何讲义>>

13位ISBN编号：9787510046322

10位ISBN编号：7510046327

出版时间：2012-8

出版时间：世界图书出版公司

作者：Riccardo Benedetti, Carlo Petronio

页数：330

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<双曲几何讲义>>

内容概要

One of the main themes of this book is the conflict between the 'flexibility' and the 'rigidity' properties of the hyperbolic manifolds : the first radical difference arises between the case of dimension 2 and the case of higher dimensions (as proved in chapters B and C) , an elementary feature of this phenomenon being the difference between the Riemann mapping theorem and Liouville's theorem , as pointed out in chapter A. This chapter is rather elementary and most of its material may be the object of an undergraduate course.

Together with the rigidity theorem , a basic tool for the study of hyperbolic manifolds is Margulis' lemma , a detailed proof of which we give in chapter D; as a consequence of this result in the same chapter we also give a rather accurate description , in all dimensions , of the thin-thick decomposition of a hyperbolic manifold (especially in case of finite volume) .

<<双曲几何讲义>>

书籍目录

- preface
- chapter a. hyperbolic space
 - a.1 models for hyperbolic space
 - a.2 isometries of hyperbolic space: hyperboloid model
 - a.3 conformal geometry
 - a.4 isometries of hyperbolic space: disc and half-space
- models
 - a.5 geodesics, hyperbolic subspaces and miscellaneous facts
 - a.6 curvature of hyperbolic space
- chapter b. hyperbolic manifolds and the compact two-dimensional case
 - b.1 hyperbolic, elliptic and flat manifolds
 - b.2 topology of compact oriented surfaces
 - b.3 hyperbolic, elliptic and flat surfaces
 - b.4 teichmüller space
- chapter c. the rigidity theorem (compact case)
 - c.1 first step of the proof: extension of pseudo-isometries
 - c.2 second step of the proof: volume of ideal simplices
 - c.3 gromov norm of a compact manifold
 - c.4 third step of the proof: the gromov norm and the volume are proportional
 - c.5 conclusion of the proof, corollaries and generalizations
- chapter d. margulis' lemma and its applications
 - d.1 margulis' lemma
 - d.2 local geometry of a hyperbolic manifold
 - d.3 ends of a hyperbolic manifold
- chapter e. the space of hyperbolic manifolds and the volume function
 - e.1 the chaubauty and the geometric topology
 - e.2 convergence in the geometric topology: opening cusps. the case of dimension at least three
 - e.3 the case of dimension different from three. conclusions and examples
 - e.4 the three-dimensional case: jorgensen's part of the so-called jorgensen-thurston theory
 - e.5 the three-dimensional case. thurston's hyperbolic surgery theorem: statement and preliminaries
 - e.5-i definition and first properties of ts (non-compact three-manifolds with "triangulation" without vertices)
 - e.5-ii hyperbolic structures on an element of ts and realization of the complete structure
 - e.5-iii elements of ts and standard spines
 - e.5-iv some links whose complements are realized as elements of ts
 - e.6 proof of thurston's hyperbolic surgery theorem

<<双曲几何讲义>>

e.6-i algebraic equations of $h(m)$ (hyperbolic structures supported by $m = t^3$)

e.6-ii dimension of $h(m)$: general case

e.6-iii the case m is complete hyperbolic: the space of deformations

e.6-iv completion of the deformed hyperbolic structures and conclusion of the proof

e.7 applications to the study of the volume function and complements about three-dimensional hyperbolic geometry

chapter f. bounded cohomology, a rough outline

f.1 singular cohomology

f.2 bounded singular cohomology

f.3 flat fiber bundles

f.4 euler class of a flat vector bundle

f.5 flat vector bundles on surfaces and the milner-sullivan theorem

f.6 suuivan's conjecture and amenable groups

subject index

notation index
