<<我要低碳生活>>

内容概要

Glaciers are melting and sea levels are rising . Environmental protection is swiftly becoming one of the most urgent challenges for humankind . Yet environmental protection does not necessarily mean global summits or high technologies , nor is it just a hobby for the affluent . Its potential lies in everyday attitudes and a call to action .

This is not a comprehensive popular science reader about climate , but a very straightforward and convenient guide to low—carbon life . Based on Chinese people ' S current lifestyles , through concerns inside and outside our homes and issues for the future , the book aims to help readers realize that environmental protection is not just a catchphrase or a fashion . Everyone may partake in it . Low—carbon life is not impossible to achieve , and everybody may benefit from changes that at first may seem trivial , but are environment—friendly actions close to our daily life . A host of useful tips and experiences make the book very practical and valuable .

书籍目录

Introduction: No Ice out There Keywords for Low-carbon Life1 Green Home A Low-carbon Life Starts with No
