章节摘录

The people on the Earth belong to many different countries. We speak many different languages and have different ideas. But we are all people born on the Earth. All of us live and die on this planet. We have never known any other home. Men believed for thousands of years that the Earth was the centre of everything. They believed that the Sun and stars moved around us. The old ideas of men should not surprise us. Most of us only believe what we see. Many years passed, and then people knew that our Earth is only a very small part of the universe (宇宙), and it moves around the Sun. What do we know about the place of our Earth in space? We know that the Earth is one of the eight planets moving around the Sun. We call the family of the Sun and its planets the solar system (太阳系)。

() 1. The Earth is our only home. We all live and die on it. () 2. Long long ago, people thought that the Sun moved around the Earth. () 3. Thousands~of years ago, the Earth was the centre of everything.

() 4. Now we know that the Earth is one of the eight planets moving around the Sun. () 5. The Earth belongs to the solar system. We look at the Moon every night. Its bright and beautiful. We write songs and poems about it. Besides that, we don't think about it very much. In the 1960s, some countries cared a lot about the Moon. They had a dream —— to be the first country to put a man on the Moon. America and Russia were part of this space race. They spent a lot of time and money on it. The first man in space was Yuri Gagarin, a Russian. That was in 1961. Years later, in 1969, an American space ship flew to the Moon. Neil Armstrong walked out. He was the first man on the Moon. The space race was over.
