<<说话的认知心理过程>>

前言

Talking is one of our dearest occupations. We spend hours a day conversing, telling stories, teaching, quarreling and, of course, speaking to ourselves. Speaking is, moreover, one of our most complex cognitive, linguistic, and motor skills. Articulation flows automatically, at a rate of about fifteen speech sounds per second, while we are attending only to the ideas we want to get across to our interlocutors. This fascinating human skill has not received the attention it deserves within psycholinguistics. Psycholinguistics is the science of human language production, comprehension, and acquisition, but the main body of research and teaching relates primarily to the latter two topics. Language production is the stepchild of psycholinguistics. Butterworth's (1980c, 1983b) excellent two-volume anthology is the only source on the subject; there is no text and no coherently written handbook. When the European Science Foundation invited me to lecture on "speaking" at a summer course in psycholinguistics to be held in Brussels in 1985, I gladly accepted and began writing what I thought would be an introductory text. A year and a half would suffice, I thought, in view of the rather limited psycholinguistic literature on the subject. My main discovery was that the literature on speaking is gigantic. But the majority of it is not to be found in standard psycholinguistic sources. Other disciplines have asked the questions that psycholinguists have ignored. Students of conversational analysis, pragmatics, discourse semantics, artificial intelligence, syntax, phonology, speech communication, and phonetics have contributed myriad theoretical insights and empirical findings. The major problem with this huge literature, however, is that it is compartmentalized: phoneticians ignore phonology, conversational analysts ignore discourse semantics and phonetics, students of AI ignore psycholinguistics, and so on.

<<说话的认知心理过程>>

内容概要

本书出自荷兰著名心理语言学家 Willem. J. M. Levelt 之手，堪称心理语言学的经典之作，也是研究言语产出的必读书目。

作者从心理语言学的角度系统考察了说话的复杂过程，不但对失语症、外语教学、口译、人工智能、话语分析等有直接的指导作用，而且由于侧重言语产出的过程，还能为语用学、语音学、音系学等带来新的视角、新的研究课题。

本书行文深入浅出，内容翔实、细节周全，对从事语言学研究的高校师生具有重要的参考价值。
