章节摘录

How did the problem start ?

At a press conference last week, Director Quan Yongshen of the Beijing Municipal Communications Research Center analyzed the reasons for traffic pressures. Quan Yongshen, Director of Beijing Municipal Communications Research Center, said, "A rapid increase in the number of automobiles, especially private cars, is the major contributor to traffic pressures in Beijing. Judging from its overall economic growth, Beijing has entered an era of rapid increase in car numbers. Another reason lies in the fact that Beijing is one of the leading cities in China and is experiencing rapid urbanization. The combination of these factors has resulted in major changes in supply and demand for transport facilities. Beijing has a severe shortage of land resources. It is an important historical city with several thousand years of history. Of the 62 square kilometers of land inside the 2nd Ring Road, protected historical sites take up 40 percent. It is impossible to carry out large - scale road construction projects here. The city's traffic problems are the result of all the competing pressures when the city reaches a certain stage of development. It is not simply a problem of the traffic system itself, at least not entirely. In other words, it is not just a simple issue of more cars and less roads. "
