<<使用Drupal>>

内容概要

《使用Drupal(第2版)(影印版)》从Drupal的大量社区贡献模块集合中受益并了解它们是如何将这个Web框架变得独具价值的。

有了这本指南，你将学习如何通过有趣的方式（最少代码）整合模块来开发多个社区驱动的网站——包括招聘布告栏、照片库、在线商店、产品评审数据库和事件日历。

《使用Drupal(第2版)(影印版)》主要关注Drupal7，也就是该开源系统的最新版本。

对每个项目花一章的篇幅阐述，通过循序渐进的案例帮助你构建网站所需的功能。

拥有《使用Drupal(第2版)(影印版)》，Drupal新手将通过实践性的介绍获得经验，而富有经验的Drupal开发者也将学到真实世界中的最佳实践。

章节摘录

版权页： 插图： Integrating Media in Content In the past, one of the biggest criticisms of Drupal, apart from the fact that it didn't (and unfortunately, still doesn't) come with a WYSIWYG editor built in was that it had no built-in image handling. Users had to either manually insert images in their posts, or choose one of the many available contributed modules to support images (and other media) on their site. As we've seen earlier in this chapter, Drupal 7 has changed this. Out of the box, Drupal core now comes with an image field that allows users to upload images. For a lot of sites, this is exactly what they need: a way to add images to nodes and display them in a predefined size and position. An example might be an Album content type, which always has an Album Cover image on each individual node, placed in exactly the same place every time. However, the Band Wagon site needs something more advanced. John and Lisa want to allow their friends to be able to freely mix photos and videos with their written content. This requires the ability to insert images in a text area, rather than in a fixed position on the node page. Luckily, the Media module that we use for photo and video support provides integration with the WYSIWYG module. We'll learn more about this when we set up the WYSIWYG editor later in this chapter.

Spotlight: Text Formats and Filters You may have noticed a funny fieldset on node and block body fields that we keep ignoring, called "Text format," pictured in Figure 4-31. The text format you select for the content will affect how that content is displayed on the site. Text formats are an important security feature of Drupal, so it pays to understand them. A text format will "scan" your content and make HTML formatting changes to it before sending it to the browser for display. Each piece of content will be associated with a text format so that Drupal always knows what it is looking for and modifying, on a case-by-case basis.
