内容概要

The material for these volumes has been selected from the past twenty years' examination questions for graduate students at University of California at Berkeley, Columbia University, the University of Chicago, MIT, State University of New York at Buffalo, Princeton University and University of Wisconsin. This volume comprises 440 problems and is divided into five parts: (1) Electrostatics; (2) Magnetostatic Field and Quasi-Stationary Electromagnetic Field; (3) Circuit Analysis; (4) Electromagnetic Waves; (5) Relativistic Particle-Field Interactions.
