

<<基本拓扑学及应用ELEMENTAR>>

图书基本信息

书名：<<基本拓扑学及应用ELEMENTARY TOPOLOGY AND APPLICATIONS>>

13位ISBN编号：9789810242404

10位ISBN编号：9810242409

出版时间：2000-12

出版时间：World Scientific Pub Co Inc

作者：Borges, Carlos R.

页数：200

版权说明：本站所提供下载的PDF图书仅提供预览和简介，请支持正版图书。

<<基本拓扑学及应用ELEMENTAR>>

内容概要

The material in this book is organized in such a way that the reader gets to significant applications quickly, and the emphasis is on the geometric understanding and use of new concepts. The theme of the book is that topology is really the language of modern mathematics.

<<基本拓扑学及应用ELEMENTAR>>

书籍目录

CHAPTER 0. SETS AND NUMBERS 0.1 Rudiments of Logic 0.2 Fundamentals of Set Description 0.3 Set Inclusion and Equality 0.4 An Axiom System for Set Theory 0.5 Unions and Intersections 0.6 Set Difference 0.7 Integers and Induction 0.8 Simple Cartesian Products 0.9 Relations 0.10 Functions 0.11 Sequences 0.12 Indexing Sets 0.13 Important Formulas 0.14 Inverse Functions 0.15 More Important Formulas 0.16 Partitions 0.17 Equivalence Relations, Partitions and Functions 0.18 General Cartesian Products 0.19 The Sixth Axiom (Axiom of Choice) 0.20 Well-Orders and Zorn 0.21 Yet More Important Formulas 0.22 Cardinality

CHAPTER 1. METRIC AND TOPOLOGICAL SPACES 1 Metrics and Topologies 2 Time out for Notation 3 Metrics Generate Topologies 4 Continuous Functions 5 Subspaces 6 Comparable Topologies

CHAPTER 2. FROM OLD TO NEW SPACES 2.1 Product Spaces 2.2 Product Metrics and Topologies 2.3 Quotient Spaces 2.4 Applications (Möbius Band, Klein Bottle, Torus, Projective Plane, etc.)

CHAPTER 3. VERY SPECIAL SPACES 3.1 Compact Spaces 3.2 Compactification (One-Point Only) 3.3 Complete Metric Spaces (Baire-Category, Banach Contraction Theorem and Applications of Roots of $y = h(x)$ to Systems of Linear Equations 3.4 Connected and Arcwise Connected Spaces

CHAPTER 4. FUNCTION SPACES 4.1 Function Space Topologies 4.2 Completeness and Compactness (Ascoli-Arzelà Theorem, Picard's Theorem, Peano's Theorem) 4.3 Approximation (Bernstein's polynomials, Stone-Weierstrass Approximation) 4.4 Function-Space Functions

CHAPTER 5. TOPOLOGICAL GROUPS 5.1 Elementary Structures 5.2 Topological Isomorphism Theorems 5.3 Quotient Group Recognition 5.4 Morphism Groups (Topological and Transformation Groups)

CHAPTER 6. SPECIAL GROUPS 6.1 Preliminaries 6.2 Groups of Matrices 6.3 Groups of Isometries 6.4 Relativity and Lorentz Transformations

CHAPTER 7. NORMALITY AND PARACOMPACTNESS 7.1 Normal Spaces (Urysohn's Lemma) 7.2 Paracompact Spaces (Partitions of Unity with and Application to Embedding of Manifolds in Euclidean Spaces)

CHAPTER 8. THE FUNDAMENTAL GROUP

APPENDIX A. SOME INEQUALITIES

APPENDIX B. BINOMIAL EQUALITIES

LIST OF SYMBOLS

INDEX
